WORLD MUSLIM POPULATION

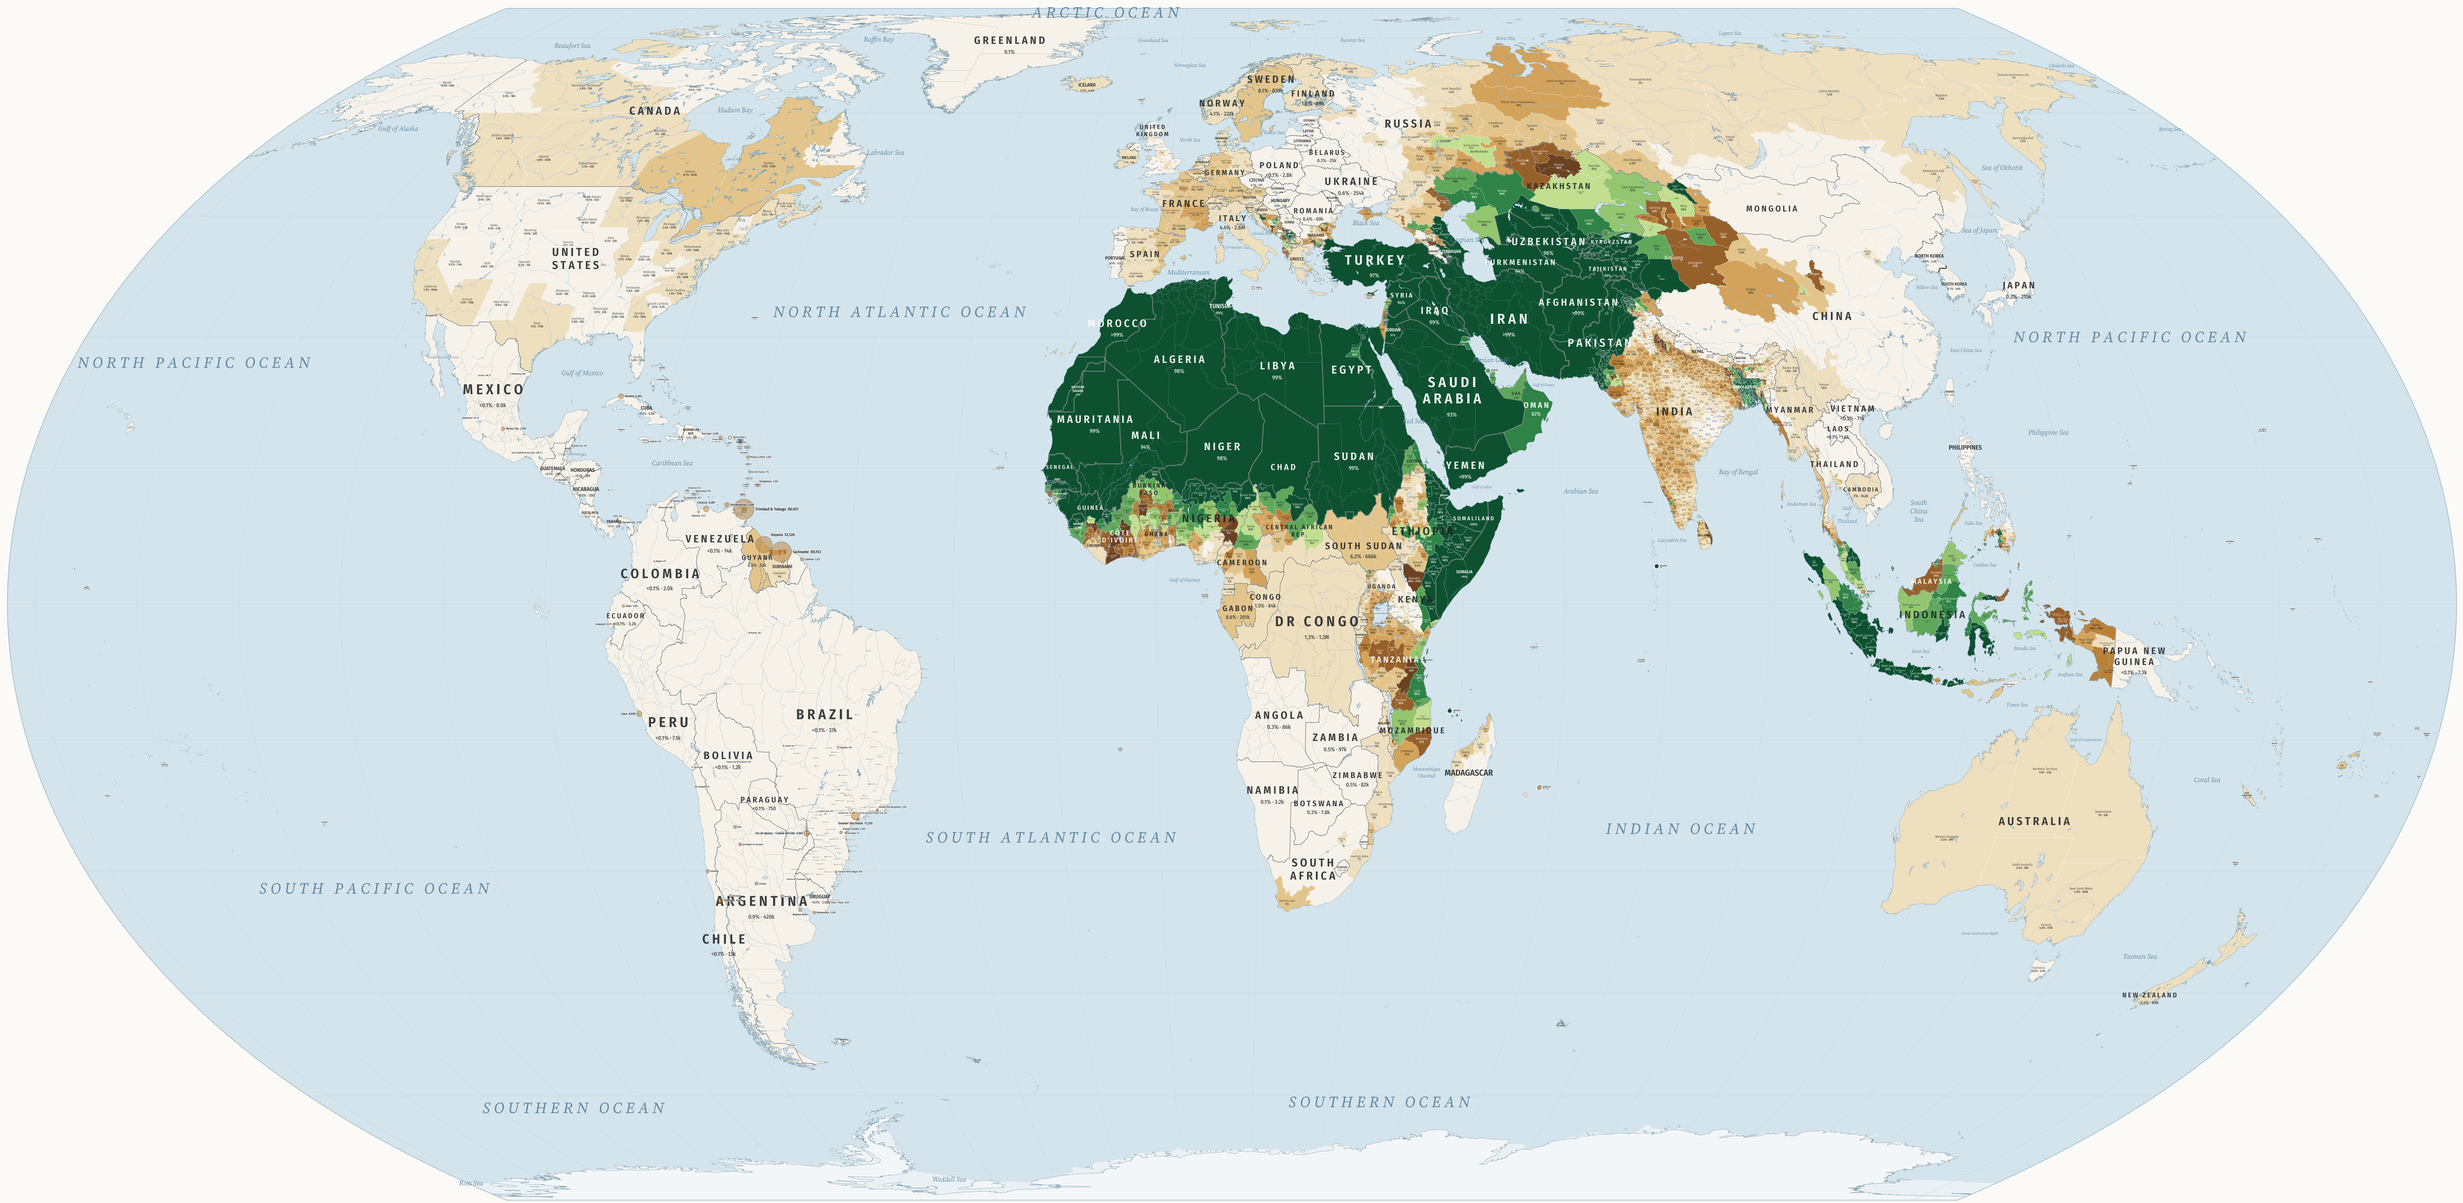
Share of Muslims in the population of every country, and of provinces and districts wherever census, survey or registry data allow

Subnational detail for 63 countries · ≈2,300 statistical units · zoom in: every unit carries its name, share and — where known — number of Muslims · regional close-ups on pages 2–6

2026 EDITION

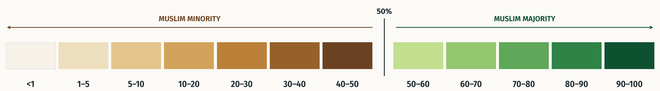
Equal Earth projection · data as of October 2026

National baseline: Pew Research Center (2020 estimates, publ. 2025)



SHARE OF THE POPULATION THAT IS MUSLIM

Latest census, survey or registry data for each statistical unit (%)



MUSLIM COMMUNITIES — LATIN AMERICA & CARIBBEAN

Circle area proportional to number of Muslims (one scale); neighbouring cities are grouped (e.g. Greater São Paulo).

- Census count (Brazil 2010, Chile 2024)
- Estimate (Pew 2020 total shared by city)
- Community, no reliable count (Argentina, Coquimbo)

- International boundary
- Disputed / de facto
- Unit boundary
- No permanent population

EXPLORE THE DETAIL

Fully vector: zoom in and every unit shows name, share and (where known) number of Muslims, e.g. "2.1% · 85k".
Search (Ctrl+F / Cmd+F) any place, e.g. "Malappuram", "Tatarstan". Pages 2–6: regional close-ups.

Values are shares of all residents. Where the census asks about ethnicity but not religion (Russia, China, Kyrgyzstan, Mongolia), traditionally Muslim nationalities are counted — the convention used by Pew. ≈ marks counts derived from share × population.

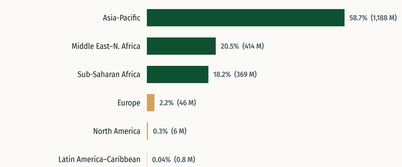
THE GLOBAL PICTURE, 2020

Pew Research Center estimates

2.02 billion Muslims

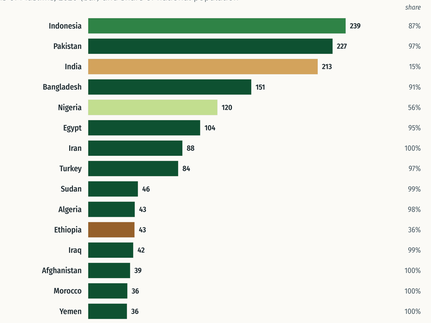
25.6% of humanity · up from 23.9% in 2010

Where the world's Muslims live



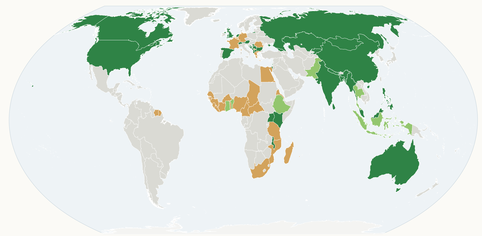
LARGEST MUSLIM POPULATIONS

Millions of Muslims, 2020 (bar) and share of national population



HOW DETAILED IS THE DATA?

Basis of the values shown, by country



- Census / register, subnational
- Subnational estimate (no recent religion census)
- Older census or registry, subnational
- National estimate only (Pew 2020)

ABOUT THIS MAP

A redrawn and updated version of Edin Radončić's 2015 map "World Muslim Population". Every country starts from Pew Research Center's 2020 estimates; wherever official statistics break the population down by religion (or by ethnicity, where religion is not asked), that national value is replaced by provincial, district or municipal figures. India: 640 districts (2011 census). United Kingdom: 374 local authorities (2021/22). Philippines, Bangladesh, Sri Lanka, Malaysia, Kazakhstan, North Macedonia, Bulgaria, Albania, Kenya, Malawi, Uganda, Ethiopia, Russia, China, Indonesia and others use census or registry tables; West, Central and East African regions without a religion question since independence use transparent estimates tied to national survey totals and are marked on the data-basis map. Dates differ between countries (2000–2024): treat each unit as the latest official snapshot, not a single-year estimate.

DATA FOR THIS PAGE

2020 U.S. Religion Census (ASARB): Muslim adherents estimated from mosque attendance surveys — a congregation-based count (4.45 million), higher than survey-based estimates (Pew: ≈3.5–4 million). Circles: the 383 metropolitan statistical areas, one scale (area proportional to count); circles for metros under 1,000 adherents are omitted. Alaska & Hawaii: see page 1.

LOCATION

WORLD MUSLIM POPULATION — DATA SOURCES & METHODS

Companion sheet to the 2026 edition. Every value on the maps can be traced to a row below.

METHODS

What is mapped

The share of the total resident population that is Muslim, for the smallest statistical unit for which a reasonably current figure exists. Classes follow the original map: seven minority classes (<1% to 40–50%) in browns and five majority classes (50–60% to 90–100%) in greens.

National baseline

All countries and territories start from Pew Research Center, "Religious Composition by Country, 2010–2020" (published June 2025; 2020 reference year). Territories that Pew does not list separately use the latest national census or are marked as estimates.

Subnational detail

Where a census, population register or official survey tabulates religion below the national level, those shares replace the national value for each province, district or municipality. Values are not rescaled to the Pew totals, so a country's units reflect the year of their own source (2000–2024). Units without a published figure that fall back to a common default value (e.g. Serbian municipalities with under 1% Muslims, smaller Scottish councils) are merged into one unlabelled remainder.

Numbers of Muslims

Labels show the share and, where the source gives it, the number of Muslims (e.g. "0.5% · 24k") for every minority unit: India, the UK, the US, Canada, Australia, Bangladesh, the Philippines, Indonesia, Sri Lanka, Nepal, Myanmar and Kenya from census counts; countries with national data only from Pew. Counts marked ≈ (Germany, France, Spain, Benelux, Austria, Switzerland, Scottish councils) are share × latest official population and inherit the uncertainty of the share.

Ethnicity-based figures

Russia, China, Kyrgyzstan, Mongolia and Kosovo's Serb-majority areas have no religion question (or an unreliable one). There, the combined share of traditionally Muslim nationalities (e.g. Tatars, Bashkirs, Chechens, Hui, Uyghurs, Kazakhs) is shown — the same convention used by Pew and by the original 2015 map.

Estimates

Nigeria, Tanzania, Côte d'Ivoire, Burkina Faso, Cameroon, Chad, Togo, Sierra Leone, Liberia, Eritrea, the Central African Republic, Mozambique, Guinea-Bissau, Forest Guinea, Upper Egypt, Casamance, South Africa, Madagascar, Suriname, France, Germany, Belgium, Greek Thrace, Kosovo's Serb-majority areas and the post-2017 Rakhine figure are modelled: regional shares follow documented geographic patterns and are constrained to the national survey or census total. Treat them as ±10 percentage points.

Community circles

In Latin America and the Caribbean Muslims are under 1% almost everywhere, so communities are drawn as proportional circles (area proportional to the number of Muslims, one scale per page). Brazil: 175 municipalities with 20+ Muslims in the 2010 census (IBGE table 137; the 2022 census groups Islam under "other religions"), merged into metropolitan areas where they adjoin (Greater São Paulo, Baixada Santista, Greater Curitiba, Greater Porto Alegre, Greater Rio…) and, on page 1, with any town within 45 km. Twin border cities are joined: Foz do Iguaçu – Ciudad del Este, Chuí – Chuy. Chile: 2024 census (persons 15+). Elsewhere Pew's national total is shared among cities with documented communities (dashed). Argentina (no census data; Pew's ≈420,000 is heritage-based) and Coquimbo appear as points without size. Paraguay's 2002 census counted 872 Muslims (486 in Alto Paraná) — far below community estimates of ≈7,000 in Ciudad del Este, many of them foreign nationals.

United States metros

Page 6 adds the 2020 U.S. Religion Census (ASARB) "Muslim estimate" for all 383 metropolitan statistical areas, retrieved from the ARDA metro reports; it is a congregation-based count (4.45 million nationally), higher than survey-based estimates.

Regional pages & projection

Page 1: Equal Earth (equal-area), centred on 11° E. Pages 2–5: Lambert azimuthal equal-area centred on each region; page 6: Albers equal-area conic. Boundaries: Natural Earth 1:10m (coastlines, countries, provinces; de facto control, disputed lines dashed), geoBoundaries, ONS 2021 local authorities, DataMeet India 2011 districts, county outlines for Xinjiang and Linxia. Province lines are drawn only for large countries without subnational data (and Paraguay).

Known limitations

India's figures date from the 2011 census (the 2027 census is under way); Ethiopia's from 2007; Thailand's provincial table from 2000. Bulgarian shares are of all residents including the ~12% who did not answer. Migrant populations (Gulf states, Western Europe, Moscow) may be under-counted by censuses.

SUBNATIONAL SOURCES BY COUNTRY
